

Important Information

Since 1 January 2007 all newly installed pre-rinse must be Water Efficiency Labelling and Standards (WELS) Scheme and WaterMark approved. The Australian Federal Government, in collaboration with State and Territory governments introduced WELS to reduce water consumption. WaterMark symbolizes that the product has been tested and approved to meet Australian Standards, this includes material testing to ensure zinc from brass components is not leaching into our waterways. Customers and in particular Plumbers should always ensure that the products they are installing have WaterMark approval otherwise they may be liable for heavy penalties.

Our GE Pre-rinse are WELS & WaterMark approved but T&S, Encore and CH Pre-rinse are not and therefore are no longer available as complete units in Australia, however we do supply spare parts to suit. Check out the Plumbing Section of our website www.c-rh.com.au for information on all of our plumbing products including technical specifications.
